

Employee Management System

Client Feature Guide & User Documentation

Introduction

The Employee Management System is a centralized platform designed to simplify employee administration, leave processing, reimbursement management, approvals, notifications, reporting, and organizational workflows. This document is intended for testers, business users, stakeholders, and management teams.

System Overview

The portal provides role-based access for Admin, Employee, Team Leader, Manager, HR, and Finance users. Each role sees only the modules relevant to their responsibilities.

Role Overview

Admin – System administration and reporting.

Employee – Self-service portal for leave and reimbursements.

Team Leader – First-level approvals.

Manager – Management approvals and oversight.

HR – Final approval and workforce visibility.

Finance – Payment processing and financial tracking.

Dashboard

The dashboard provides a quick overview of activities, requests, notifications, and important information. Users can navigate to all available modules from the dashboard menu.

Employee Features

- View personal dashboard
- Submit leave requests
- View leave history and status
- Submit reimbursement claims
- Upload receipts and supporting documents
- View reimbursement history
- Upload digital signature
- Manage profile information
- Change password
- View notifications
- View company holidays

Leave Management

Employees can create leave requests and track their approval status. The system records leave type, dates, duration, and comments. Approvers can review and approve or reject requests. Employees receive status updates throughout the process.

Leave Approval Workflow

Employee → Team Leader → Manager → HR → Final Approval

Benefits:

- Transparent approval process
- Approval tracking
- Faster processing
- Complete request history

Reimbursement Management

Employees can submit reimbursement claims with supporting receipts and expense details. Each claim moves through the approval process before reaching Finance for payment processing.

Reimbursement Workflow

Employee → Team Leader → Manager → HR → Finance → Paid

Capabilities:

- Multiple expense items
- Receipt uploads
- Business purpose tracking
- Approval history
- Payment tracking

Notifications

The notification center keeps users informed about approvals, rejections, status changes, and important updates. Notifications help users stay informed without manual follow-up.

Team Leader Features

- Review leave requests
- Approve or reject requests
- Review reimbursement claims
- Monitor team activities
- Receive approval notifications

Manager Features

- Team oversight
- Leave approvals
- Reimbursement approvals
- Team request visibility
- Operational monitoring

HR Features

- Final approval authority
- Workforce visibility
- Leave calendar oversight
- Request monitoring
- Policy compliance review

Finance Features

- Review approved reimbursements
- Track payment status
- Mark reimbursements as paid
- Financial visibility
- Reimbursement reporting

Admin Features

- User management
- Employee onboarding
- Role assignment
- Team management
- Holiday management
- Reporting and analytics
- Search and filters
- Data export capabilities

User Management

Administrators can create employee accounts, update information, assign roles, manage organizational structure, and maintain employee records from a single location.

Team Management

The system allows organizational teams to be managed centrally. Employees can be assigned to teams and reporting structures can be maintained efficiently.

Holiday Management

Company holidays can be managed centrally, ensuring employees have visibility into upcoming holidays and planned closures.

Reports & Analytics

Management users have access to reporting capabilities that provide visibility into employee requests, reimbursement activity, organizational trends, and operational metrics.

Benefits

- Centralized employee records
- Reduced paperwork
- Faster approvals
- Better visibility
- Improved communication
- Digital audit trail
- Increased productivity

Testing Scenarios

1. Login with each role.
2. Submit leave requests.
3. Approve leave requests.
4. Submit reimbursement claims.
5. Process approvals.
6. Verify notifications.
7. Review reports.
8. Validate role-based access.

Future Enhancements

- Payroll Management
- Payslip Generation
- Advanced Analytics
- Mobile Application
- Real-Time Notifications
- Enhanced Reporting

Conclusion

The Employee Management System provides a complete digital workflow for employee operations, approvals, finance processing, and administrative management. The platform improves efficiency, transparency, and operational control across the organization.
